ENERGY SAVING:

Converter Active Front End acts as an ac/dc rectifier, controlling two-direction exchange of power (absorption or power regeneration) according to the needs of the load.

AFE provides energy savings for all applications that require regeneration of energy in mains, as an alternative to the dissipative braking resistors.

Converter Fundamental Front End acts as an ac-dc rectifier, controlling two-direction exchange of power, according to the needs of the load, without adjusting the Bus DC voltage and THD current.

It works like a diode bridge but it allows to recover energy to the grid as well.

Compared to the AFE there is an increase in current size with a saving in terms of cost and space.

Main functions

Free acceleration and deceleration setting

Starting speed and stopping speed set separately, during working, acceleration time, deceleration time, object speed, movement overrides is possible. Between 1 PPS and 400 MPPS, acceleration and deceleration setting can be set freely in 1msec as a unit.

Hard limit deceleration stop function

The Deceleration while hard limit is collided can be overridden.

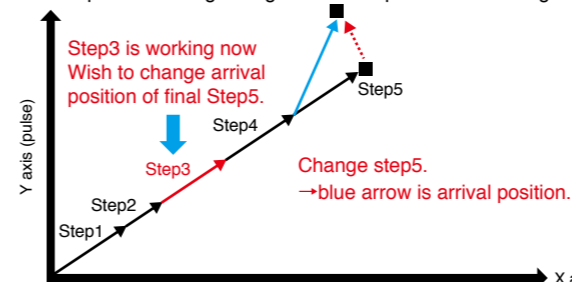

Main functions

Interpolation Control function

Interpolation data up to 5000 steps can be recorded. During working, changing Interpolation data, changing/revising object position, pausing interpolation actions is possible at any time. In addition, from pausing to restarting, exchanging interpolation axis etc, is possible.

example)
The arrival position change image when interpolation is working

Data which is changing, will be work in the next time.

The following image when 7Step is working continuously, it can be stopped at any position.

Interpolation pattern up to 8, can work at the same time. (8 buffer Max5000 Step)

Axle linkage function

Axle linkage function is on one axis we can addition and subtraction command position (output pulse) or actual position (input pulse) of another axis.

Connect Work Stand (XYZ axis) to the encoder of conveyor, we do not need to stop conveyor to control Work Stand.

Gantry Axis Control

Gantry Axis Control is carried as a base function. Using axle linkage function, connect axis Y2 to axis Y1, then send command to axis Y1 only, axis Y2 is also operating.

Soft landing function

When to stop the bonding equipment etc., according to the overshoot, shock will happen. Parts may be damaged. Soft landing function can control the overshoot, protects machine, material, or worker.

Trigger Input Drive function

Using General input as trigger signal, executing actions that was set beforehand. This function can be used for drive start, synchronous start.

Timing Output function

In the designated position or schedule time, sending output signal. This function can be used for ON/OFF Control of strobe light, camera shutter, sensor etc.

64-Axis Multi-Function Soft Motion Controller

WMX3 for Realtime Express

Features

RTEX and EtherCAT. Soft Motion technology gets the best of both worlds.

- Proven high-performance motion controller WMX3 (patented) now supports "hybrid" networks that simultaneously communicate with the high-speed networks RTEX and EtherCAT. Up to 64 axis synchronous control is possible.
- Applying RTEX to the servo network and EtherCAT to the sub-network enables using cost effective EtherCAT I/O modules.
- Advanced functions such as gantry control and various acceleration/deceleration profiles can be easily realized.

<Advantages of hybrid controls>

If you feel...

- ✓ Not enough I/O points left for operations.
- ✓ A large number of nodes sacrifices the communication cycle.
- ✓ I/O modules are too costly.
- ✓ Want to choose the right I/O module from a lot of options.

Hybrid Network can provide solutions

- ⇒ High-performance RTEX servo network for axis control requiring high synchronization
- ⇒ High cost performance EtherCAT modules for I/O control and stepper motors.
- ⇒ Soft motion enables high-speed real time control over the servo network and I/O network.

Integrated into one PC. Slimming. Networking.

- WMX3 enables the integration of operation screens, image processing, and motion control applications of up to 64-axis for a slimmer control device.
- Reduced wiring man-hours and material costs by reducing wiring through networking. Contributes to noise immunity.
- Use a commercially available Windows PC: Users can freely choose between PCs for small embedded applications as well as high-spec industrial applications depending on the user's application and concept.

PLC Motion Unit

B3632101-UNT-LE02

Features

PLC motion unit best suited to build motion control system

- **32 axes synchronous control**

All servos sync to the host device assuring precise CP control.

Communication period is 1 ms over max. 32 axes allowing various control settings.

- **Software interface easily transportable from pulse train type software**

Command functions such as single axis PTP control, linear interpolation, arc interpolation, origin return and drive parameter change are provided. The unit will operate as the host controller sets the parameters and calls DLL functions. (DLL functions will be disclosed.)

- **Connection of Yokogawa PLC to Panasonic network servo**

By connecting the unit to the host PLC via PCI bus and to the driving section via network interface, various monitoring operations can be performed without stress.

The combination of the unit and PLC expands functions such as to external signal interface.

Software CNC COSTANTINO CNC

Features

Costantino is a **SoftCNC** that can be completely customized by OEM customer to create their own CNC solution, using proven and robust components.

Costantino **runs on any** IPC so you can choose your favorite brand that can guarantee international support on hardware components. It runs completely independent on Windows using its dedicated CPU processors in a multicore environment using its dedicated memory amount and its Ethernet controller. Costantino connects with servo and IO devices of any brand using its integrated **EtherCAT master and configurator**. If customer wishes to use different fieldbus such as **Mechatrolink or CANopen**, Costantino can interface an ISAC-provided EtherCAT slave device that provides compatibility with all of these interfaces, and more. In addition to the natively supported fieldbuses, OEM customers can add support to any other fieldbus using an SDK that allow to easily develop by themselves or using ISAC engineering help.

Costantino comes with a PLC environment that is compatible **IEC61131-3**, so you can program it with any of the languages that are part of the standard: ST, IL, LD, FBD, SCD. In addition, you can create FBs in C language and thus reuse components written for different hardware solutions.

Costantino CNC interprets **G-codes** (ISO6983) with some features that are important in many application; with 25000 blocks/sec and more than 250 blocks of look ahead, it is one of the fastest CNC in the market.

- All movements are under **Jerk** control for tooltip and joints, this guarantees the best mechanics lifetime and performance;
- It runs up to 8 different interpolation programs at the same time, and handle auxiliary axes for clams, loaders and unloaders, or tool change, for a total of 128 axes;
- It supports **High Speed Machining**, that keeps cutting feedrate constant, reduces machining timing, and reduces machine vibrations;
- It comes with high accurate vibration suppression algorithms, following error compensation, velocity feed forward and many other tools to achieve the best cutting results;
- It compensates **tool length and radius**;
- It can handle online tool measures, tool wearing and life, and complex tool change procedure;
- It includes **5 axis machining interpolator** to program tool tip in machines equipped with bi-rotative heads, tilting tables, and even robots.
- It comes with a powerful **simulation engine** capable of showing results on the material before machining takes part.

Programmable Automation Control

PAC ILIUM

Features

Ilium is a newly developed PAC (Programmable Automation Controller) based on more than 10 years of ISAC experience in the field. It includes all main functionalities needed to build an Industrial Automation application, all in one device: **PLC Logic Execution + Motion Control + Communication and integration with other software components + HMI.**

Those functionalities **do not interfere between each other**, as it is possible to use more than one core of the processor; all of the tasks are executed with **high precision** and with **defined execution times**. Ilium interfaces with other devices through an Ethernet port that supports **EtherCAT** or **Powerlink**. Using the ISAC Bridge, Ilium supports many other fieldbuses (**CANopen, Mechatrolink, Analog interface** with position reading through **Encoder, SSI or ENDAT, Pulse/Direction** or **Stepper** interface). Ilium offers complete diagnostic tools for faults and anomalies detected on the I/Os peripherals and on the servo drivers. All of the errors are stored, allowing to analyze them at a later time, even in the case of unattended operation.

Ilium is available in **two formats**: the application is **portable** between different formats, the development tools are the same, as well as the application libraries.

Ilium Embedded is a compact device, powerful enough to drive **up to 11 EtherCAT axes**. It is available with **touch screen**, it supports **USB, COM** ports, external **HDMI** video, one **Ethernet** port for programming and Web interfaces.

It does not contain moving parts, all of the components are non-removable, few Watts are enough to allow it to run.

Ilium soft-Motion is a **real-time software** that runs on an IPC; it uses exclusively **a part of the hardware resources**: one or more cores of the CPU, a portion of RAM, one Ethernet port; communication and HMI is managed by Windows. **You can choose the PC**: choose the ISAC model that suits your needs, or your preferred IPC supplier.

Ilium soft-Motion comes with no performance compromises, and offers the flexibility and the power of the PC to realize a customized user interface, using ISAC tools or alternative ones.

Ilium offers powerful and integrated development tools in order to make easier the PLC logic development and its debug, the start-up of the machine or of the plant, and its maintenance. You can develop the application in the IEC61131 standard languages (ST, IL, LD, FBD, SCD). Program the PLC logic with Multiprog, from Phoenix Contact Software. You can also use ANSI C, and compile in native code, in order to obtain the maximum performance and reliability, to create whole tasks with this language, or to create FBs to be used inside Multiprog. Ilium supports PLCopen MC part 1 and 2, version 2.0. The supplied FBs includes Cams (programmable from PLC logic or to be created from sampling), Gears, Electric Shafts, Phasing, Slave Synchronous Movement (referred on more Masters), all movements based on space or speed control, with speed, acceleration and Jerk control to assure fluid movements and the dampening of the resonances. The servo drivers can be tuned using the integrated diagnostic tools, as the oscilloscope, and all of the parameters will be stored and sent to the servo drivers by Ilium itself, making the replacing of servo drivers very easy.

Programmable Automation Controllers

Power Family

Features

All controllers of the **Power family** are equipped with 32 bit Risc (Reduced Instruction Set Computer) CPU to allow use of a sole **Real Time Multitasking Operative System (OS)** to manage PLC, CNC, HMI and IT tasks. The scale between the different models depends on:

- CPU with different clock (132 or 264 MHz) and cores (1 or 2)
- Memory architectures with different parallelism (16 or 32 bit)

The **compiler**, which generates the executable code, is integrated in the firmware of the controller so the system becomes completely autonomous and independent from the evolutions of the consumer world (PC) and **unaffected by computer viruses**.

There are two main executors, each one with its set of instructions:

- **PLC executor** which cycles continuously between the first and the last instruction of the PLC program
- **CNC executor** which starts only on request, it can be put on hold or deleted and it ends after the last instruction of the CNC program

CNC executor can process up to **5 CNC** task at the same time. Their execution are transferred in a buffer (**Look Ahead**) where they are processed to obtain effective trajectories of the interpolated axes. The commands inserted in ISO editor (the user program written in **G-code**) are interpreted and executed launching the execution of different blocks present in the BLC editor.

The OS manages many types of communication ports:

- **Ethernet** with the support of TCP/IP, FTP and ModbusTCP protocols; **OPC server** and **WEB server** are also available
- **RS232/RS485** serials with **Modbus** protocol (ASCII and RTU)
- **USB** which can connect **MSD** (Mass Storage Device) of different types and with more memory volumes, **HID** (Human Interface Device) like keypads / mouse and tracking devices like Gamepad

It can manage up to **28 axes** in point to point, gearing, camming and interpolation mode. Their trajectory can be shaped via many different levels of **Jerk** in order to reduce the inertial effect of load without great loses in performances.

Application Sample

- Plane cutting machines (Plasma, Laser, Oxy, Waterjet, Diamond disk)
- Stone working machines (Bridge saws, Polishing, CNC contouring)
- Woodworking machines (CNC for drilling, routing, tenoning, sawing)
- Metal machining (3-5 axes milling, parallel & automatic lathe turning)
- Textile (Cutting, Sewing, Labelling, Finishing & Washing)

Servo actuator

DD Motor (ZMD series)

Features

Realizing outstanding high speed and precision performances thanks to its small and compact design

● **Outer rotor mechanism**

The outer diameter's compact design enables to drive directly the roller, making it suitable for indexing rotation

● **High-resistance bearings**

Simple and rigid structure for a higher load resistance

● **Hollow diameter $\phi 50\text{mm}$**

Wiring and piping can be easily stored in the hollow space of the motor, reducing the installation space.

● **Low price**

Model's size reduction leads to a more competitive price matching today's markets needs

● **Short lead time/ quick delivery**

The reduction of the components and a smarter stock arrangement critically reduce the production lead time

● **What is a Direct Drive Motor?**

A DD Motor can transmit the torque of the electric motor directly to the driving objects, without the use of any reductions such as belts, pulleys or reduction drives.

- High efficiency
- Low noise
- Outstanding precision
- High reliability
- Maintenance-free

- If using radial load, axial load and moment load at the same time, please contact us.
- This motor can be used with any type of servo driver. However, when using a servo-driver that differs from the one suggested, please be sure to use it below the rated current value.

*1 With the use of RD1416SPW (RD converter) *2 Horizontal installation *3 Horizontal installation *4 By using cross-roller bearings *5 As option, it is also possible to improve the accuracy of surface deflection. For further details, please contact us.

Application Sample

The installation of the DD Motor enables more efficient operations and it doesn't require any maintenance

Roller-drive application e.g.

- Thanks to the outer motor, it's possible to build the motor inside the roller, saving space
- It works smoothly, avoiding uneven operations or movements

<Other possible applications>

- Printing equipment
- Coating machines
- Film-manufacturing machinery
- Roll-feeders

Indexing rotation application e.g.

- Space-saving design for a more compact structure
- As no reduction device is needed, it's possible to avoid complex installations, improving its efficiency and reliability with no back-lash

<Other possible applications>

- Semiconductor making equipment
- Devices for manufacturing
- liquid crystal display panels
- Assembling robots
- All kind of indexing applications

Feed back scale application example

*1 There is the difference of resolution and maximum rate from the specification by original supplier as per the servo driver limitation of maximum pulse frequency. The maximum pulse frequency is 400 Mpps for A5 family and 4 Gpps for A6 series. We show the value of A6 family on this table.

- Please contact us when you study the system with a scale because the driver and the scale combination has restriction as per the feedback system between full closed control system and linear system.

Compact Actuator AF series

AF017N/042N/080N/125N/380N/500N/050C/120C/200C/320C

Features

High precision, stiffness, quality

Integrating Panasonic servo motors with large industrial robot market share Precision Reduction Gear RV

Compact

Compact drive unit is made possible by machining gear directly onto motor shaft

High versatility

Compatible with the MINAS-A5/A6 family of standard servo drivers

Merit 1 Before After

Compact design

The total length is extended due to the input gear and coupling.

With the AF series... The machining of gears onto the motor shaft results in a very compact design; **up to 23% shorter than conventional models.**

Merit 2 Before After

Greater reliability

Machining is very difficult, resulting in axial runout, poor concentricity accuracy, and producing abnormal noise.

With the AF series... Shipped after machining and assembly, **no need to worry about abnormal noise.**

Merit 3 Before After

Greater quality

O-ring or liquid sealant

Oil seal

O-ring

Greasing can be troublesome, If seals are forgotten, grease can leak

With the AF series... Already contains grease; **no need to worry about leaking.**
